## 1 Laboratories

Basic structure:

- lab\_intro.ipynb: [http://localhost:8888/notebooks/lab\\_intro.ipynb](http://localhost:8888/notebooks/lab_intro.ipynb) Getting started, Jupyter, Git, Numpy, Matplotlib. Tasks involve calculating with numpy arrays and plotting (basic, subplot, complex, 3d).
- lab\_sympintro.ipynb: [http://localhost:8888/notebooks/lab\\_sympintro.ipynb](http://localhost:8888/notebooks/lab_sympintro.ipynb) Symbolic math with sympy, basic and advanced differentiation, symbolic plotting and integration. Tasks involve symbolic plotting, roots, differentiation, and integration.
- lab\_taylorexp.ipynb (optional): [http://localhost:8888/notebooks/lab\\_taylorexp.ipynb](http://localhost:8888/notebooks/lab_taylorexp.ipynb) Basic Taylor expansion for symbolic expression. Tasks involve plotting approximation for different orders.
- lab\_newtonm.ipynb (optional): [http://localhost:8888/notebooks/lab\\_newtonm.ipynb](http://localhost:8888/notebooks/lab_newtonm.ipynb) Newton's method for finding roots of symbolic equation. Tasks involve basic application, and also considering higher-order Taylor expansion.
- lab\_symdiffeq.ipynb: [http://localhost:8888/notebooks/lab\\_symdiffeq.ipynb](http://localhost:8888/notebooks/lab_symdiffeq.ipynb) Symbolic first-order RC lowpass step response. Task requires plotting second-order RLC.
- lab\_symdiffeq2.ipynb (optional): [http://localhost:8888/notebooks/lab\\_symdiffeq2.ipynb](http://localhost:8888/notebooks/lab_symdiffeq2.ipynb) INCOMPLETE
- lab\_symfseries.ipynb: [http://localhost:8888/notebooks/lab\\_symfseries.ipynb](http://localhost:8888/notebooks/lab_symfseries.ipynb) Using symbolic math to calculate Fourier series coefficients, and lambda functions for numerical reconstruction plots. Symbolic functions defined using "Piecewise" and integrated.
- lab\_reconstruct.ipynb: [http://localhost:8888/notebooks/lab\\_reconstruct.ipynb](http://localhost:8888/notebooks/lab_reconstruct.ipynb) Representing continuous-time signal from samples. Reconstruction using interpolation on regular spacing, and using a RBF with coefficients estimated from samples. Tasks involve interpolation with different kernels and fitting a polynomial model.
- lab\_convolution.ipynb: [http://localhost:8888/notebooks/lab\\_convolution.ipynb](http://localhost:8888/notebooks/lab_convolution.ipynb) Requires reconstruct. Convolution of bandlimited continuous-time signals with discrete-time processing.

- `lab_discdiffreq.ipynb`: [http://localhost:8888/notebooks/lab\\_discdiffreq.ipynb](http://localhost:8888/notebooks/lab_discdiffreq.ipynb) Euler methods for numerical approximate step response of first-order lowpass RC circuit.
- `lab_discdiffreq2.ipynb` (optional): [http://localhost:8888/notebooks/lab\\_discdiffreq2.ipynb](http://localhost:8888/notebooks/lab_discdiffreq2.ipynb) INCOMPLETE
- `lab_bodeplot.ipynb`: [http://localhost:8888/notebooks/lab\\_bodeplot.ipynb](http://localhost:8888/notebooks/lab_bodeplot.ipynb) Basic plotting of first-order lowpass response, justifying log-log scales. Task requires plotting second-order.
- `lab_freqresprclp.ipynb`: [http://localhost:8888/notebooks/lab\\_freqresprclp.ipynb](http://localhost:8888/notebooks/lab_freqresprclp.ipynb) INCOMPLETE  
Requires `discdiffreq` and `bodeplot`. Check task 3 in lab? Change to  $RC=0.001$  and modify frequency range? But then can't see transients.

Scratch:

- `lab_symdelta.ipynb`: [http://localhost:8888/notebooks/lab\\_symdelta.ipynb](http://localhost:8888/notebooks/lab_symdelta.ipynb)
- `lab_sym_scratch.ipynb`: [http://localhost:8888/notebooks/lab\\_sym\\_scratch.ipynb](http://localhost:8888/notebooks/lab_sym_scratch.ipynb)
